

Inspection Cameras, Display and Recording Equipment

The system offered here is using the latest 'state of the art' technology providing accurate and precise viewing of pressure tests. The monitor displays all 4 cameras (if connected) or selected camera. The controller allows for angle, tilt and zoom/focus of all cameras.

The scope of supply is as follows;

1) 1 x Colour Dome Type Camera

These cameras offer super high resolution 550TVL images from their Sony 1/4" Super CCD sensors.

They can be panned, tilted and zoomed in seconds.

Each camera has a 10x Optical and 10x Digital (combined 100x) Zoom lens.

The cameras are designed and sealed for 'high risk' application areas e.g. a pressure test bay environment.

They incorporate an auto focus function for quick and simple use.

A panning angle of 360° and tilt angle of 90° allows for fine and exact pin point viewing.

An Eztek driver board is built in to enable simple 'single cable' installation.

These cameras come complete with wall mounting brackets.

2) 1 x Controller Work Station

The workstation houses the display, controller, Eztek driver cards and power supplies required. This enables a tidy installation and helps protect the electronic equipment.

17" LCD Display

Designed for the industrial workshop, these high brightness LCD displays incorporate a special noise reduction filter for extra definition when used with the cameras. A high 800TVL resolution provides clear colour imaging. Up to 4 camera's can be connected & displayed.

Controller complete with Joystick control

This controller provides accurate and precise adjustment from a multifunction joystick. All camera settings can be accessed and set from the simple keyboard and display screen.

3) Cabling

All necessary cabling is included in the scope of supply. Armoured CAT5 cable.
